The ski lift is the water cooler of the ski slopes with idle chit chat and conversations. Where are you from? Do you like your skis? Are you staying warm? The warmth of you and your liftmates' hands, feet, and head enters into the small talk often. The enjoyment of your day on the slopes is partly measured by your warmth especially your feet. Warmer feet result in a better day on the slopes. Teko Socks, a company based in Boudler, Co., produces comfortable and warm ski and boarding socks. Cutting down the company's carbon footprint is a driving theme behind the Teko's environmental commitment. The company continues with this commitment to "green" practices by utilizing organic Merino wool and recycled polyester in their products.

Teko Ski Socks held up to overly abusive tugging and pulling and a dozen wash cycles to test the socks' durability. The result was impressive, and the socks' fabrics showed little signs of wear. Nothing is more inconvenient and irritating than a ski sock losing its elasticity and sliding down your ankle. The Teko Ski Socks stayed put due to a well-constructed ankle band.

Teko categorizes their socks into three categories based on weight – ultralight, light, and medium. The medium weight ski socks are the warmest and best for bitter cold days. The ultralight ski sock delivers in early season skiing and during the warmer spring months. The lightweight sock provides versatility. Thinner than the medium weight, it too will keep your tootsies toasty. Teko Ski Socks are a great choice for swooshing or riding, and the company is committed to lessening their impact on the environment with responsible business practices. Teko offers their ski socks in a variety of colors for feet small and large.
