

nestFIT

Unrivaled support, unbelievable comfort.
Shoes built around the actual
shape of your feet.

UPPER

Upper :

The upper is built around a last designed by measuring the curves and contours of 20,000 different feet. The last mirrors the contact points of the leading portion of the big toe, the curve along the other four toes and the indentation of the arch and instep.

LAST

Last :

The NestFIT last is designed to account for every contour of the human foot, eliminating unnecessary gaps and pressure points.

IN SOLE

Insole :

The insole matches the curves and contours of the bottom of the foot, eliminating gaps for unmatched comfort. Three different densities of EVA polymer give the correct amount of support to each area of the foot.

MID SOLE

Midsole :

The variable density midsole compliments the insole to give you that "walking on a cloud" feeling.

OUT SOLE

Outsole :

The top of the outsole matches the outsole rubber profile for a seamless supportive whole. The slight heel and forefoot "rocker" eases the impact of the initial foot "strike" and supports the natural progression of the step.
